

Remote Supervision Board Policy

March 8, 2022

While it cannot be disputed that the benefits of face-to-face mentoring and supervision of engineer or land surveyor interns cannot be overemphasized; it is also recognized that a certain degree of benefit can be realized through mentoring and supervision by using electronic communication platforms. With the need to conduct business not only in person, but virtual interaction with business clients becoming more acceptable and necessary in today's business climate, the use of technological communication tools have become a necessity in modern business interactions. This is true not only for client interactions, but it is also essential for employee communication and training.

The Board will recognize remote supervision of engineers and land surveyors, but only on a case-by-case basis.

- An active formal training and supervision plan must be developed by a company wishing to employ remote supervision techniques, that describes, in detail, the methodologies to be employed for remote supervision, the frequency of in person face-to-face interaction, and the frequency of virtual contact between the engineer and/or land surveyor intern and the supervisor.
- The company will be responsible for implementing and maintaining a plan that is consistent for all interns, guides the intern towards progressive knowledge and responsibility, and shall include a requirement stating that a majority of the supervised training shall be in person face-to-face interaction.
- Documented evidence must be provided to the Board that clearly shows adherence to the remote supervision plan demonstrates increased responsibility.
